- IS YOUR FILE SIZE IS CORRECT**
 - If your job is quoted as a 17"x11" document then your file should be laid out in **inches** at 17" x 11"
- IS YOUR BLEED CORRECT**
 - Bleeds should extend 1/8" beyond the page border
 - Programs such as Photoshop require you to build your bleeds internally - ie an 8.5"x11" file built in Photoshop would require an image size of 8.75"x11.25" to have the required 1/8" bleeds
 - If you are converting your file (w/bleeds) to a PDF format - be sure your job settings allow for a larger page size to accommodate the extra image area required for bleed
- ARE YOUR LINKED FILES COLLECTED**
 - Include both vector and raster images used in your layout program in a folder labeled "ART"
- DID YOU COLLECT ALL OF THE FONTS NEEDED**
 - All fonts used in your file must be supplied or embedded
 - Any fonts used in Illustrator or Freehand need to be converted to paths or outlines and saved as an ".eps"
- IS YOUR RESOLUTION HIGH ENOUGH**
 - All rasterized graphics need to be 300 dpi (dots per inch) at 100 percent placed size
- DO YOU HAVE THE RIGHT COLOR**

 - Spot color jobs must have appropriate Pantone colors
- ARE YOU SUBMITTING A PDF**
 - Must be high resolution (Press setting NOT Print, screen or ebook) / **EMBED FONTS**
